in the aftermath of emerging market crises from russia to asia and latin america there is a quest for better monetary arrangements that are more crisis proof fixed rates are out flexible rates are in with a policy focus on inflation targeting but there is of course the alternative of abolishing exchange rates all together this paper revisits the issue of dollarization or currency boards to review what arguments in the debate stand up the case for flexible exchange rates emphasizes the need for a tool to accomplish relative price adjustment this paper argues that in an intertemporal perspective most shocks require financing in the capital market rather than adjustment moreover countries frequently do not use their flexible rate to play a cyclical role and as a result only a pay a premium for the option to depreciate but do not take advantage of the flexibility on the contrary they engineer systematic overvaluation in the context of inflation targeting

over the past 20 years there has been a proliferation of emerging market crises and a vast accumulation of commentary descriptive theoretical and applied highlighting the origins and mechanics of each crisis and of crises in general and there is plenty of analysis on how to deal with crises both in terms of prevention and of cures is it possible now to distill from all this a simple set of propositions that summarize the experience and capture the chief lessons this paper sets out a few propositions that summarize what is known and

accepted the interest in doing so is to promote a set of presumptions about what is unsound practice with a presumption that it cannot fail to engender in time a crisis at the center of that discussion is the role of balance sheets moreover crises are not just financial experiences but rather involve large and lasting social costs and important redistribution of income and wealth that makes it especially important to secure agreement on what constitutes bad practice and identify areas of continuing controversy
